CAROLINA BIRD CLUB

Spring Bird Count — 1982

John O. Fussell III

As was the case last year, twenty localities were censused. Nineteen of the areas censused this year were the same as those censused in 1981. However, no report was received from Beaufort County this year, and Charlotte, where no census was held in 1981, was censused this year. Coverage was obviously good on this year's Spring Count. Even though there were only 20 censuses, there was a total of 493 field observers and 1347 field-hours. Only a few localities were worked by skeleton crews.

Most of the counts were held on the weekends of 1-2 May and 8-9 May. Only four were held on 24-25 April. Almost all localities had pleasant weather conditions with mild temperatures and light winds, although the North Carolina piedmont and mountain counts held on 8 May had some early morning rains. On the other hand, there was, in association with most censuses, little or no weather of the type that produces strong flights and/or groundings of landbird migrants, and several compilers mentioned a scarcity of migrants. No exceptionally rare species were reported on the 1982 Spring Count.

On the coast, Morehead City, Wilmington, and Charleston all had very good species totals. Inland, Raleigh had a respectable 141 species and Jordan Lake had 33 species of waterbirds.

On this Spring Count, a few species totals stand out. Impressive was the total of **445** Brown Pelicans This species has definitely been increasing at a number of localities. The number of Double-crested Cormorants reported on inland counts (**121**) was unprecedented; most of these were at Jordan Lake. House Finches continue to increase. They were recorded on nine censuses (total of **148** individuals), and two more areas reported them during the count period. Large numbers of Red-breasted Nuthatches, Evening Grosbeaks, Purple Finches, Pine Siskins, and American Goldfinches were present in the Carolinas this spring.

COMPILERS' COMMENTS

COAST

CAPE LOOKOUT, N.C. (center: 4.5 miles NE of Cape Lookout Lighthouse).

9 May. Census was restricted to Cape Lookout, from the lighthouse to the mainland, and to birds seen along the ferry route between Harkers Island and Cape Lookout. A cold front passed the previous night and emphasis was placed on searching for migrant landbirds in the shrub thickets. **Turkey Vulture** is rare this far from the mainland. Northern Bobwhites and Ring-necked Pheasants are established from introductions 20 or more years ago. **Upland Sandpiper** was on the lawn of the coast guard station. **Northern Rough-winged Swallow** is rare here, although it breeds on Harkers Island. The Palm Warbler was late. The **Evening Grosbeak** was late and is very rare on this barrier island.—JOHN FUSSELL, 1412 Shepard Street, Morehead City, N.C. 28557.

MOREHEAD CITY, N.C. (center: 0.7 mile NW of Crab Point)

25 April. The late Redhead (Compiler, Davis) was a crippled drake. The **American Swallow-tailed Kite** (Compiler, Davis) was flying southwestward over North River Marsh. The late Yellow-bellied Sapsucker and Purple Finches were at Newport's yard near Morehead. The **White-breasted Nuthatch,** male **Black-throated Blue Warbler, Northern Waterthrush,** and **Louisiana Waterthrush** were all found by Davis at Walker's Mill Pond near Newport. The nuthatch, both heard and seen closely by Davis, is very rare in area although it is resident in sections of nearby Craven County. Davis saw the unstreaked throat and white superciliary line of the Louisiana Waterthrush, which is very rare in the count circle, where there is little or no breeding habitat.—JOHN O. FUSSELL III, 1412 Shepard Street, Morehead City, N.C. 28557.

WILMINGTON, N.C. (center: Monkey Junction).

24 April. The 2 immature **Great Cormorants** were seen by Galizio and Hardwick at Carolina Beach Inlet. Identification was based on presence of whitish belly and yellow bill. [Great Cormorants have been found in the Wrightsville Beach-Carolina Beach area during several recent winters and the observers are familiar with the species. However, it should be stressed that immature cormorants should not be identified as Greats based solely on these criteria. Immature Double-cresteds frequently become white bellied and yellow billed in spring.—JF] **Blue-winged Warbler** and **Black-throated Blue Warbler** were found by Davis along Orton Road. Brackett found the **Cape May Warbler** at Carolina Beach State Park. [The **Fox Sparrow** (Nunnally) was considered to be unusual (very late) but no details were provided.—JF]—KITTY KOSH, 188 Lake Forest Parkway, Wilmington N.C. 28401.

CHARLESTON, S.C. (center: 14 miles NE of Mount Pleasant and 0.5 mile E of US 17).

2 May. 100 of the **130** Gray Catbirds and 100 of the **121** Black-and-white Warblers were found on Bull's Island

*Seen during count period but not on count day.

(Compton et al). [Isn't this late for so many catbirds on Bull's Island? Weren't the Nashville Warbler and Chestnut-sided Warblers rare?—JF]—JULIAN R. HARRISON, Biology Department, College of Charleston, Charleston, S.C. 29401.

COASTAL PLAIN

CUMBERLAND COUNTY, N.C. (center: point on I-95 that is 1 mile N of I-95 Middle Road overpass).

9 May. The following count day and count period species were late: Lesser Scaup, Red-breasted Merganser, Sharp-shinned Hawk, Northern Harrier, American Kestrel, White-crowned Sparrow, Song Sparrow. A **Short-billed Dowitcher** (Compiler) was at the ponds at Becker Sand and Gravel Company on 10 May. [The bird was not heard and the details do not rule out Long-billed Dowitcher. However, a Long-billed would be extremely unusual so late.—JF[—PHILIP J. CRUTCHFIELD, 901 Montclair Road, Fayetteville, N.C. 28304.

RAVEN ROCK STATE PARK, N.C. (center: 1 mile NW of US 421 bridge at Lillington).

1 May. Tom Howard found the **Upland Sandpiper** in a cattle pasture on SR 1418.—LEON S. JERNIGAN, 130 Kennel Lane, Clayton, N.C. 27520.

SOUTHERN PINES, N.C. (center: 1 mile NE of Skyline).

2 May. The **Laughing Gull** (Dunn, Howard) was in breeding plumage. [The upper wing surface was observed to be all dark, thus ruling out the slight possibility of Franklin's Gull.—JF]—J.H. CARTER III, P.O. Box 891, Southern Pines, N.C. 28387.

COLUMBIA, S.C. (center: the point where Southern Railroad crosses Mill Creek).

1 May. [The **Philadelphia Vireo** was noted as being unusual, but no details were furnished.—JF]—JACK STEWARD, 1304 Cardinal Drive, West Columbia, S.C. 29169.

PIEDMONT

RALEIGH, N.C. (center: Norfolk and Southern RR crossing on Lake Wheeler Road).

1 May. Despite excellent weather conditions, the species count and numbers of individuals were lower than usual. Apparently the count was too late for some transients and too early for others. A prime birding area, Lake Wheeler, suffers increasingly from intensive use by power boats and fishermen. The most noteworthy finds were a **Common Moorhen,** seen by many count participants at Greenview Pond and a **Nashville Warbler** found by Mullen at Crabtree Creek. A **Lark Sparrow** was seen by Josh Lee during the count period. [No details were provided for either the Nashville Warbler or Lark Sparrow.—JF]—R.J. HADER, 3313 Cheswick Drive, Raleigh, N.C. 27609.

DURHAM, N.C. (CENTER: 1 mile N and 1 mile E of US 501 bridge over Eno River).

25 April. The unfilled Falls of the Neuse lakebed attracted many unusual waterbirds. Notable were the many shorebirds. Of the 9 species of Charadriiformes, only the American Woodcock failed to set a new high. Outstanding totals were the **83 Greater Yellowlegs** and **60 Pectoral Sandpipers.** Other noteworthy waterbirds were the **Little Blue Heron** and **Cattle Egrets** (Alwon), **Red-breasted Merganser** and **Sora** (McConnell) and count period **Double-crested Cormorants** (W.H. Wagner).—MIKE SCHULTZ, 3008 Glendale Avenue, Durham, N.C. 27704. **27704.**

CHAPEL HILL, N.C. (center: intersection of Franklin and Columbia Streets in Chapel Hill).

2 May. The filling of Jordan Lake has created habitat for such species as Double-crested Cormorant, Osprey, Herring Gull, and Ring-billed Gull. The total count of migrant warbler was considered to be low.—BILL AND MARGARET WAGNER, Route 2 Falls of New Hope, Chapel Hill, N.C. 27514.

JORDAN LAKE, N.C. (center: the point where SR 1700 formerly crossed New Hope River).

9 May. Notable was the large number of Double-crested Cormorants **(73).** The most unusual of the many shorebirds was the **White-rumped Sandpiper** (Alwon, Gerard). **Semi-palmated** and **Black-bellied Plovers** were found by Davis, Jasmine, and Senior. [Of the 2 Rough-legged Hawks (Broughton et al), only 1 was described, and that description was limited to the tail. Such details are certainly inadequate for this species, which is rare even in mid-winter, much less in may.—JF]—BARBARA ROTH, 7 Lone Pine Road, Chapel Hill, N.C. 27514.

GREENSBORO, N.C. (center: transmission tower of radio station WBIG).

24 April. Species total was low, a consequence of the late cool weather.—DONALD ALLEN, 2611 David Caldwell Drive, Greensboro, N.C. 27408.

WINSTON-SALEM, N.C. (center: intersection of I-40 and Silas Creek Parkway).

8 May. Spring migration was very poor this year. Very few shorebirds were seen; no shrikes could be found. American Robins were unusually abundant; this was probably because of the large number that wintered. Rare were the adult **Little Blue Heron** (Bynum, Knowles, Weatherly) and the count period **Common Moorhen** (Kalet, Compiler), which was found injured on 6 May, after it had attempted to land on a blacktop road.—RAMONA R. SNAVELY, 115 Plymouth Avenue, Winston-Salem, N.C. 27104.

STANLY COUNTY, N.C. (center: in Morrow Mountain State Park).

8 May.—VIRGINIA FOGLIA, Route 5, Box 412, Albemarle, N.C. 28001 and TONI PHILLIPS, 1600 Hickory Avenue, Albemarle, N.C. 28001.

IREDELL COUNTY, N.C. (center: South Yadkin River Bridge on Chipley Ford Road).

8 May. **Fish Crow** (Fred Weisbecker) was identified by call. [Is this the first record of the species in this area?—JF]—SAM CATHEY, 130 Park Street, Statesville N.C. 28677.

CHARLOTTE, N.C. (center; intersection of South and Woodlawn Streets).

1 May. The good count of shorebirds was the result of attention given to the sewage treatment ponds. The cold spring apparently delayed migration. Note the presence of Winter Wren and large number of Evening Grosbeaks and scarcity of many summer residents.—W.A. BROKAW, 3611 Quail Ridge Lane, Matthews, N.C. 28105.

GREENVILLE COUNTY, S.C. (center: intersection of highways 291 and 29).

4 May.—ROSA LEE HARDIN, Star Route Box 60, Cleveland, S.C. 29635.

CALDWELL COUNTY, N.C. (center: Lenoir).

7 May.—HELEN E. MYERS, 310 Beall, Lenoir, N.C. 28645.

MOUNTAINS

BREVARD, N.C. (center: 5 miles SE of Brevard at Rich Mountain Lookout Tower).

8 May.—WALTER HOLLAND, JR., 290 Maple Street, Brevard, N.C. 28712.
